

## INBOUND LINK LOAD BALANCING SOLUTION FOR BROKING SEGMENT

In Share **Broking segment**, Hosting server for business applications such as **Trading Server**, **SBS/Broadcast server**, **Back office server** is becoming more common. The increasing need for quality server hosting introduces new challenges that limit businesses from growing.

### \* 100% Server Access Reliability & Application Availability

Ensure 100% Server Access reliability & Application Availability is essential when you host your Trading Server. It is impossible to predict when a connection downtime will take place. Each time a visitor / Remote client experiences problem with accessing your service means losing business. Clients need to change their ODIN Diet registry whenever there is link failure in ODIN manager / Application Server side.

## \* Bandwidth Limitation

The bandwidth available on your Internet connection limits the speed and capacity of your application. Your business depends on your network performance. When numerous remote visitors/client are requesting access to the server simultaneously, they will experience slow responses which results in their complaints.

## \* High Operating Cost

Better network performance is expected as your business expands. A faster Internet connection is needed to support the increasing demands. However, dedicated Internet lines are usually not cost-effective and sometimes the quality they offer might not even meet your requirement.

## \* AnexGATE solution

**AnexGATE** allows you to provide 100% Server Access Reliability and increase bandwidth with multiple Internet links combination. **AnexGATE's Inbound Load Balancing** Algorithms can enhance customer experience by enabling visitors to enter your server through different Internet links. As well as with the increased bandwidth, Client /visitors are able to access your server with faster response time and higher speed.

Often a single network connection does not provide enough reliability even for a small business houses. Using the **AnexGATE**, you can now combine multiple Internet connections to allow your remote client /visitors to access your server with 100% reliability. All Internet links will automatically back each other up. When any link becomes unavailable, the Balance delegates traffic through a healthy link to prevent service interruption. Our link load balancing capabilities allows for Internet sessions to be balanced across multiple WAN links which enables faster connectivity for end-users and increases the overall bandwidth available to the network.

## \* Flexibility with Minimal Cost

AnexGATE gives you the flexibility you desire to accommodate your business needs while keeping cost minimal. Being able to utilize multiple lower cost DSL/cable connections, you can immediately cut your expensive T1 lines and still maintain the same performance quality or even surpass it. You can aggregate and optimize your Internet connections according to your preference; you can also add more bandwidth anytime to adapt to future network expansion.

- \* All specifications and photos are subject to change without notice
- \* Compliant with CE, FCC certifications
